Additional Notes: Cookie

Cookie vs Session

Cookie	Session
Cookies are client-side files that contain user information.	Sessions are server-side files which contain user information.
Cookie ends depending on the max-age you set for it.	A session ends when a user closes his browser.
A cookie is not dependent on Session.	A session is dependent on Cookie.

Cookie-Related Headers

There are two headers:

a) **Set-Cookie:** The server sends the set-cookie header in response to an HTTP request, which is used to create a cookie on the user's system.

b) **Cookie:** The Cookie header is included by the client application with an HTTP request sent to a server if there is a cookie that has a matching domain and path**.**

Q. What do you think 'set cookies' can be altered at the front end or not?
Ans. 'Set cookies' cannot be altered at the front end because browsers block frontend JavaScript code from accessing the set-cookie header.
